

February 21, 2024

Dear all,

I'm currently looking for candidates for a two-year (minimum) postdoctoral contract.

The topic is quite open, as long as it connects to my interests in plasma physics. Currently my main focus is modeling the cylindrical magnetized plasma device (linear device) SPEKTRE, in construction in our lab, with fluids and/or gyrokinetic models, and with a special care for end-losses and boundary conditions more generally. Anyway, the topic of the postdoc will be mainly driven by the interests of the candidate.

The main place of work would be in Nancy, but depending on the topic, stays in other labs in France and abroad will be considered.

Ideally the contract would start around September 2024, but it could start anytime between now and the end of 2024. Early 2025 might be negotiable.

Would you be so kind to circulate in your networks the attached announcement?

Best regards,

Maxime Lesur,

Institut Jean Lamour - Université de Lorraine

2 allée André Guinier
